

Effect of Harmful Information Communication Technology in Nepal

Bijaya Upadhya

Scientist, Nepal Agriculture Research Council

ayadhya.com@yahoo.com

Abstract

Information Communication technology (ICT) invention are very useful if it is used with positive thoughts. There are lots of technology of Information technology (IT) that are being used. In context of Nepal, Some IT invention are used for their own interest. Mostly it has been used for business purpose without taking permission of Nepalese people. It is playing even on human health to do business of medicine and doctor field. Nepal is hugely suffering from such type of intervention. IT that directly connects to human brain are deviating the information of people in accordance to interest of this technology. This technology have information of all the resources and based on this information they are playing role to fulfil their own interest which is not in accordance to interest of Nepalese people. To get rid from this Nepalese people should get awareness of such type of technology.

Keywords: Information Communication Technology, Human body, Nepalese people, Suffering

1. Introduction

Nepal is importing lots of IT invention from different country of world. Some are very useful in daily life while some country using false technology without permission of government as well as of person who are facing this technology. It means some are very harmful to perform activities in daily life. The radio, TV, mobile and its supporting devices are some of the useful means of communication while IT that directly connects to human brain are can be used with positive and negative effect. Later one can be used to collect information from people level to deliver information to policies level if can be used with positive concept if it is used as with negative concept we can find all the negative aspect of it in the society. But, Nepal has been suffered from this harmful technology very much.

2. Objective

To identify the harmful effect of IT invention

To identify the behaviour of IT invention and its effect on human behaviour

To identify the effect of IT invention on different field

3. Materials and Methods

An intervention has been applied to a Scientist, Bijaya Upadhya to identify the effect of IT that directly connects with the human brain. On this perspective it gives different behavioural activities to a person through this technology and find out the perception of Nepalese society regarding the behaviour of that person. It also read the concept of person regarding its intervention and how much he has been affected through it. The technology has been intervened for 6 years.

4. Result and Discussion

4.1 Effect of Harmful Information Communication Technology in different system of body

Nepal is suffering from different predators of the world. One of the most vulnerable is the invention of Information Communication technology. ICT that directly communicate the human brain do not need any physical technology (TV, Radio, and Mobile) as a receiver. It directly commands different system of body. The system of body like nervous, endocrine, respiratory, circulatory, integumentary are under control of it. It has a double role. It can play directly on different system of body or indirectly through the nervous system.

Through nervous system it directly commands the neurotransmitter of neurons of brain that develops neural circuit to deliver message to different part of the brain. It results the different symptoms of different diseases that's why people are suffering from different diseases. It works on the process through electromagnetic radiation (EMR). On one hand EMR itself is harmful for body health on another IT that directly connects with human brain creates symptoms of different diseases. IT plays on information he has during his life time and creates different feelings by playing in his system. Its accuracy is so optimum and develop hindrance during the working time or any activities you want to perform in your daily life. It develops conservative

feelings in human. Our conservative community on one side and the syndrome on another side results embarrassing and harassment to one life who has been attacked by this IT inventions. All the diseases like social anxiety, schizophrenia, depression, Alzheimer disease, and Parkinson are through this IT inventions. Even a different diseases other than this are due to IT control. It does not mean that all the diseases are through this and all physical fracture and like that are by this but it also can play the role to make it happen because it can control the human body in its own.

It plays a critical role in ups and down of different hormone of endocrine system. Increase and decrease in level of hormone and its deviation in function are some major effect of this technology. This results the syndrome of different disorder in human. If you watch the positive side of it this technology can maintain the optimum level of hormone in body physiology. Respiratory system is also affected by this technology. It develops asthma symptoms in human body. It acts on respiration system of lungs and make it affected.

In circulatory and digestive system it can control all the function they does for human body requirement. It can creates diseases of these system as well as can maintain good function of it. It can digest the food in very good way or it can play the role to undigested the food and maintain its level in circulatory system. Even control on when to go toilet and when not are under this technology. Blood pressure is also under control of it. It can increase and decrease the blood pressure as well as can maintain it on normal. Integumentary system is also under control of it. By playing in gland it can creates rashes, itching etc.

During the time of intervention, person creates different logic to make it calm. And all the logic are very beautiful. He gives his all information he has achieved during his study period and working time. He creates connection of agriculture knowledge to his personal life and all are delivered to it. There are lots of concept regarding of different field and all are well known to it after intervention.

4.2 Effect of Harmful Information Communication Technology in behaviour of Human

Furthermore it can control the human activities along with his environment. It can bit person through the control on different system of body. It can creates different unusual feelings on human that affects the daily activities of person for example one cannot buy his own clothes, food due to unusual feeling created by it on affected person. It can control the whole activities that required to be done for continuation of daily life. The person who has been affected by this technology shows different unusual behaviour that's why people surrounding to him feels he has been affected by different diseases. The control by this intervention and our conservative society on another hand makes one's life very tough. It can create the feeling of fear, anger, sorrow, joy and many more which are unusual during the time of performing specific activities.

4.3 Effect of Harmful Information Communication Technology in Nepal

Nepal is suffering from this type of technology very much. All the activities that are performed in daily life are known to this technology. All the data and information that are relevant in doing further work are well known to it. It works based on this data and information. It does not mean that it is working for us but it plays the role to demoralize people and to continue its business of different field. For e.g., it creates different diseases on people and tells them to go

for doctor to continue business of medicine as well as to pay doctor charge. It directly effects on livelihood scenario of Nepalese people.

4.3.1 Effect of Harmful Information Communication Technology in Education Sector

IT that directly connects with human brain can deliver information and knowledge from the source to sink if can be used with positive thoughts. To make people educated in remote areas of country, it can be used well. But this technology has negative intention and are making people frustrate, suppressed and depressed to conduct business. People need good education to have positive thoughts but it is delivering bad information from inside. This technology have thoughts like if people become educated we cannot rule them.

4.3.2 Effect of Harmful Information Communication Technology in Business Sector

All the function it is doing are for business purpose. The business field like medicine, agriculture, IT and others are affected by it. In terms of medicine it develops patient of different diseases and make them to go for doctor. In agriculture field it develops different diseases and insect pest and make them to buy different pesticides, fungicide and bactericide etc.

4.3.3 Effect of Harmful Information Communication Technology in Agriculture Sector

In terms of Agriculture field, it has a role to entered diseases and insect pest inside the country as well as on growth and development of the crops that's why farmer faced different problems and get demoralize to do their own job. Furthermore it insists farmers to do agriculture job without taking support from technical person and finally they have to suffer a lot. It means agriculture activities are also under control of it.

4.3.4 Effect of Harmful Information Communication Technology in Political Sector

Political field is also becoming susceptible to this technology. It commands leader to speak it wants and makes them highlighted or lowlighted. It can make people speak different things as well as make them not to speak by controlling nervous system and vocal cord. It means it can control all the things in its own.

5. Conclusion

Nepal has been suffered a lot from 'Harmful Information Communication Technology'. It is controlling the body system of Nepalese people. All the environment is also under control of it. Relevant data and information are well known to it. Based on these data and information it is playing a role to defect Nepalese scenario. They are not doing the work in accordance to interest of Nepalese people but their on own interest.

6. Recommendation

Nepalese people and personnel of different field should get awareness about this technology. It should be removed from Nepal as it has information of all the resources including human and used in accordance to their interest.
